

## Symposium and Masterclass – An invitation to You

PGCS is the ideal opportunity to grow your knowledge and learn how to apply it effectively. When you attend the sessions, interact with our presenters, and network across a range of opportunities, you have multiple opportunities to learn and grow.

The PGCS program offers a fusion of interpersonal and technical skills in a setting that is designed to enhance everyone's ability to contribute to making their projects successful. The program's careful design recognises the important of people, skills, and experience in creating project success.

The program features two key parts:

1. A two-day symposium consisting of keynote plenary sessions, stream sessions, panel sessions delivered by a range of international and local experts sharing their experiences – the good, the bad and the ugly. The symposium also features a dedicated speaker's corner where you can talk directly with the speakers, and a range of networking opportunities.
2. Three International Masterclasses run on the third day covering capability based planning and other key topics. You choose the one best suited to your needs.

Delegates can choose to attend the Symposium, a Masterclass, or both.

### **We are delighted to share this feedback from 2023:**

*Emily-Jane Willmot. I enjoyed the conference and especially enjoyed the opportunity to join virtually so that I didn't need to fly internationally and have the extra cost of accommodation.*

*On-line feedback: Excellent Keynote and very relevant to current work.*

*Thank you for a very good session – I am really interested in using AGLIE development within a Systems Engineering context, so I learned a lot today.*

*Critical and very relevant – this stage is entirely missing frameworks in current use.*

PGCS creates a platform to discuss and disseminate new ideas across all sectors - academia, industry, and government - to learn from each other, resolve problems, and share knowledge. Attending PGCS can be one of the best ways to accelerate professional learning and networking, by providing an opportunity to engage in a rich way with your career network in just a few days.

Attendance at PGCS can lead to significant returns on investment in terms of both an employee's and the organisation's development. Developing an employee's growth mindset and encouraging them to gain skills, supports application of the new knowledge learned from a global perspective to their own organisation.
